

ABSTRACT

Provided is a trim panel suitable for attachment to a displaceable seat, and a seat. The seat has a seat substructure with a first part and a second part and a seat component. The seat component is moveable with the first part in a horizontal direction relative to
5 the second part of the seat substructure and displaceable relative to the first part in a second direction. The trim panel is configured to be attached to the seat component and to be displaceable with the seat component for concealing parts of the seat substructure from normal viewing angle by a user.
